

An Experimental Study of the Effects of Government Terror Warnings on Political Attitudes

Variables & Inclusion Criteria

Version 1

July, 2011

METHODOLOGY

This study examined the role that exposure to terror threats has on the American public's view of presidential candidates and candidate preferences; specifically, the effect that terror threats have on political attitudes. The survey was conducted by Knowledge Networks (KN) over the Internet in May and June 2008, using a nationally representative sample of 1282 American adults. KN recruits panel members over the telephone via random digit dialing (RDD) and provides them with WebTV equipment in exchange for their participation in weekly surveys, which they complete online. All Americans were sampled from the KN panel.
